

AHMED AL-HAWAJIRI

FULL-STACK WEB DEVELOPER — LARAVEL / PHP / MYSQL

Gaza, Palestine | Open to remote work

+972 599 520 085 | ahmedalhawajri89@gmail.com

ahmedalhawajri.vercel.app | linkedin.com/in/ahmedalhawajri | github.com/ahmedalhawajri89

PROFESSIONAL SUMMARY

Full-Stack Web Developer with a BSc in Applied Information Technology and five complete web applications published as public, readable source. Back end in Laravel 12 and PHP 8.2 on MySQL — relational schema design, role-based access control enforced in the data layer, and business rules that hold under concurrency. Front end in Blade and Vue 3. Every project ships Arabic RTL built with CSS logical properties from the first line, not mirrored afterwards. Seeking a junior full-stack developer role, on-site in Palestine or remote.

TECHNICAL SKILLS

Back End — PHP 8.2+, Laravel 12, Eloquent ORM, Laravel Sanctum, migrations and seeders, REST-style APIs, policies and middleware, role-based access control, queues, file upload and storage

Front End — Blade, Vue 3 (Composition API), Pinia, Vue Router, React 18, Next.js 14, JavaScript ES6+, HTML5, CSS3, SCSS, Tailwind CSS, Vite, responsive design

Databases — MySQL, SQLite, relational schema design, indexes and constraints, generated columns, transactions and row-level locking

Testing & Tooling — PHPUnit, Pest, Vitest, Playwright, Git, GitHub, Composer, npm, Laravel Pint, Chart.js

Practices — Design systems and design tokens, repository pattern, server-side data tables, Excel import and export, i18n and Arabic RTL interfaces, web accessibility, technical documentation

PROJECTS

Kafala — Orphan Sponsorship Platform

Laravel 12 · PHP 8.2 · MySQL · Sanctum · Vue 3 · Vite · Pinia · Chart.js

End-to-end sponsorship platform: a 17-page Arabic public site, a Laravel API on MySQL, a Vue 3 admin console of 18 screens, and a sponsor portal — all served from a single origin, so there is no CORS, no cross-origin cookies, and the content security policy stays at connect-src 'self'. 29 Eloquent models across 18 migrations. A sponsor cannot sponsor the same child twice at once but can return after cancelling: MySQL has no partial indexes, so the rule is a unique constraint built on a generated column that holds a value only for active states. Every figure the site publishes is derived from the database, not written into the page. 12 API feature test suites (Pest), plus Vitest and Playwright.

Mawaheb — Arabic Talent Discovery Platform

Laravel 12 · PHP 8.2 · MySQL · Blade · Vite · Breeze · Socialite

Talent platform where creatives publish portfolios and apply to opportunities, with three account types — talent, scout and brand — chosen at registration and gated by middleware and policies rather than hidden buttons. Server-rendered in Blade with no JavaScript framework, because discovery pages must be crawlable and fast on mobile. 15 Eloquent models, 20 migrations, 21 feature test suites. Fully bilingual through lang/ar and lang/en, with no user-facing string hardcoded in a template. Follower and application counters are incremented inside the same transaction as the row that caused them.

github.com/ahmedalhawajri89/mawaheb-platform

Booking Management System

Vue 3.5 · Vite 6 · Tailwind CSS 4 · Pinia · Laravel 12 · PHP 8.2 · MySQL · Sanctum

Arabic-first appointment system: customers book without an account, the business runs the day from one console. Availability is computed, never stored — free slots are generated from service duration, buffer time, the resource and that weekday's opening hours. Conflicts use half-open interval overlap, so 09:00–10:00 and 10:00–

11:00 never collide. The rule is enforced where it counts: the API locks the resource row before testing for overlap, inside the transaction that writes the booking, so two operators cannot confirm the same slot — a test proves it with two live database connections. Data access sits behind one repository interface with two implementations, selected by a single environment variable.

Graduation Project Tracker

Laravel 12 · PHP 8.2 · MySQL · Sanctum · Blade · Next.js 14 · React 18

University system managing graduation projects across three roles — admin, supervisor and student — each with its own dashboard, route group and permissions, applied in the data layer so a known URL grants nothing. 13 models across 21 migrations. Server-side data tables keep search, sort and pagination fast over hundreds of records, and Excel import and export handles whole student cohorts in one operation. Colours, radii, shadows and motion are defined once in a documented token layer. A separate Next.js marketing front end accompanies the application.

Furnish — E-Commerce Platform

Laravel 12 · PHP 8.2 · MySQL · Blade · SCSS

Furniture storefront with an admin dashboard behind role-based access. 24 Eloquent models across 30 migrations, covering four domains: catalogue, purchase, customer and operations — products and variants, carts, orders, payments, coupons, shipping, reviews, wishlists and inventory logs. Order line items capture the price at purchase time, so later price changes never rewrite historical orders.

Personal Portfolio

HTML · CSS · JavaScript — no framework, no build step

Bilingual one-page portfolio with full RTL/LTR mirroring through CSS logical properties and a dark theme. Every visible string lives in one dictionary under a key — 90 keys per language — and every design value in a single token file. Works with JavaScript disabled and directly from the file system.

EXPERIENCE

Independent Full-Stack Developer

Self-directed projects · Gaza, Palestine · June 2022 – Present

- Built and published five complete web applications end to end — schema design, back end, front end, tests and documentation — three of them full Laravel applications on MySQL.
- Designed relational schemas totalling 89 Eloquent models, including database-level guarantees: unique constraints on generated columns, row-level locking inside write transactions, and line items that capture values at the time of the transaction.
- Implemented role-based access control across three separate products, enforced through policies and middleware in the data layer rather than by hiding interface elements.
- Wrote the supporting product documentation — requirements, architecture, information architecture and user flows — alongside the code, and published every project under an MIT licence with a written README.

EDUCATION

Bachelor of Science, Applied Information Technology

Al-Aqsa University · Gaza, Palestine · 2018 – 2022

LANGUAGES

Arabic — Native **English** — Intermediate: reading technical documentation
