AHMED AL-HAWAJIRI

Full-Stack Web Developer — Laravel, PHP, MySQL

Gaza, Palestine | Open to remote work
+972 599 520 085 | ahmedalhawajri89@gmail.com
github.com/ahmedalhawajri89 | ahmedalhawajri.vercel.app | linkedin.com/in/ahmedalhawajri

PROFESSIONAL SUMMARY

Laravel/PHP developer who builds complete web applications on MySQL, using Vue 3 or React/Next.js where the project calls for it. Focused on database design, business rules, permissions and transaction safety. Five independent projects published with public repositories and live demos, each covered by an automated test suite. Seeking a junior full-stack or backend developer role, remote or on-site in Palestine.

TECHNICAL SKILLS

Backend: PHP 8.2, Laravel 12, Eloquent ORM, migrations, REST APIs, Laravel Sanctum, Spatie Permission, Laravel Excel, Yajra DataTables

Frontend: Vue 3, Pinia, React 19, Next.js 16, Blade, Alpine.js, Tailwind CSS 4, Bootstrap 5, JavaScript, HTML5, CSS3

Database: MySQL — schema design, transactions, row-level locking, unique indexes, generated columns

Testing & Quality: Pest, PHPUnit, Vitest, Playwright, Larastan (PHPStan), Laravel Pint

Tools & Deployment: Git, GitHub, GitHub Actions, Composer, npm, Postman, Claude API; Vercel and TiDB Cloud (MySQL-compatible) for the hosted demos

Other: role-based access control (policies, middleware), Arabic RTL and Arabic/English localisation, server-side pagination, Excel/CSV import and export, Content Security Policy

PROJECTS

Independent projects, built end to end. Each has a live demo with demo accounts and a written case study on the portfolio site.

Lamma — Orphan Sponsorship Platform 2026

Laravel REST API · Vue 3 admin console · Spatie Permission

- Built a public site, sponsor portal and admin console with roles for sponsors, administrators, accountants and field supervisors.
- Protected money flows in MySQL: a generated column with a unique index blocks duplicate active sponsorships while allowing re-sponsorship after cancellation, a unique idempotency key on payments blocks double charges, and a disbursement must be approved by someone other than the person who recorded it.
- 384 automated tests: 331 Pest feature tests on MySQL and 53 Playwright tests against the real API; Pest and Larastan run in GitHub Actions.

Code: github.com/ahmedalhawajri89/Lamma · Demo: lamma-sponsorship.vercel.app

Waeda — Appointment Booking for Service Businesses 2026

Laravel REST API · Vue 3.5 single-page app · Tailwind CSS 4 · Claude API

- Built a customer booking page that needs no account and an operator day board with drag-to-reschedule, calendar and analytics; slots are generated from service duration, buffer time and business hours.
- Prevented double booking under concurrent requests with a row lock and a half-open interval check in one transaction, proven by a test that races two live database connections.
- Built an "appointment guard" that sends reminders and reads customer replies with the Claude API, falling back to rule-based word lists if the model fails.
- 414 automated tests: 217 PHPUnit on MySQL and 197 Vitest, plus a Playwright walkthrough of every screen; both suites run in GitHub Actions.

Opsight — Operations & Business Intelligence Dashboard 2026

Next.js 16 / React 19 front end · Laravel REST API · Larastan

- Built a multi-business dashboard that combines orders, stock and expenses, compares each period with the previous one and flags ten rule-based insights, with owner, manager, analyst and staff roles.
- Enforced 48 abilities through Laravel policies; cost and profit fields are redacted on the server for staff accounts, with a test proving they never receive them.
- Prevented double stock deduction with a row lock at order confirmation, verified by a concurrency test; 831 automated tests (Pest, Vitest, Playwright) and Larastan run on every push in GitHub Actions.

Code: github.com/ahmedalhawajri89/opsight · Demo: opsight-demo.vercel.app

Diwan — Arabic-First Furniture Store 2026

Blade · Tailwind CSS 4 · Alpine.js

- Built a bilingual storefront and admin panel with checkout, returns and VAT invoicing, and a room-fit check that tells the customer whether a piece fits their room and doorway.
- Locked the product row inside the order transaction to prevent overselling; 510 Pest tests, including design-rule checks over the Blade templates, run in GitHub Actions.

Code: github.com/ahmedalhawajri89/diwan-e-commerce · Demo: diwan-xi.vercel.app

Takharruj — Graduation Project Management Platform 2023 – 2026

Blade · Bootstrap 5 · Yajra DataTables · Laravel Excel · Next.js 14 marketing site

- Built separate student, supervisor and admin spaces with their own auth guards, routes and permissions; grades lock on approval and reopen only with a reason in the audit log.
- Added server-side data tables and Excel import/export of student cohorts; 481 PHPUnit tests. Started in 2023 and upgraded to current framework versions in 2026.
