PROFESSIONAL SUMMARY

Full-stack web developer with a BSc in Applied Information Technology. Builds complete Laravel/PHP applications on MySQL with Vue 3, React/Next.js or Blade front ends, all bilingual (Arabic/English). Five self-directed projects, each with a live demo, public source code and an automated test suite run in GitHub Actions. Seeking a junior full-stack or backend developer role, remote or on-site in Palestine.

TECHNICAL SKILLS

Backend: PHP 8.2, Laravel 12, Eloquent ORM, migrations, REST APIs, Laravel Sanctum, Spatie Permission

Frontend: Vue 3, Pinia, React 19, Next.js 16, Blade, Alpine.js, Tailwind CSS 4, Bootstrap 5, JavaScript, HTML5, CSS3

Database: MySQL — schema design, transactions, row-level locking, unique and partial unique constraints, generated columns

Testing & Quality: Pest, PHPUnit, Vitest, Playwright, Larastan (PHPStan), Laravel Pint

Tools & Deployment: Git, GitHub, GitHub Actions, Composer, npm, Postman, Vercel, TiDB Cloud, Claude API

Other: role-based access control (policies, middleware), Arabic RTL and Arabic/English localisation, server-side pagination, Excel/CSV import and export, Content Security Policy

PROJECTS

Self-directed projects, built end to end. Each has a live demo with demo accounts and a written case study on the portfolio site.

Lamma — Orphan Sponsorship Platform 2026

Laravel 12 REST API · Vue 3 admin console · Blade · MySQL

- Built a public site, sponsor portal and admin console with roles for sponsors, administrators, accountants and field supervisors.
- Protected money flows at the database level: a partial unique constraint prevents duplicate active sponsorships, idempotency keys prevent double charges, and every disbursement needs a second person's approval.
- 384 automated tests (Pest and Playwright) run against MySQL and the real API.

Code: github.com/ahmedalhawajri89/Lamma · Demo: lamma-sponsorship.vercel.app

Waeda — Appointment Booking for Service Businesses 2026

Laravel 12 REST API · Vue 3.5 · Tailwind CSS 4 · MySQL · Claude API

- Built a customer booking page that needs no account, plus an operator day board with drag-to-reschedule, calendar and analytics; slots are generated from service duration, buffer time and regional business hours.
- Prevented double booking under concurrent requests with a row lock and a half-open interval check inside one transaction, proven by a test that races two live database connections.
- Built an "appointment guard" that sends reminders and classifies customer replies with the Claude API, falling back to keyword matching if the model does not answer in time.
- 414 automated tests (PHPUnit, Vitest) plus a Playwright walkthrough of every screen.

Code: github.com/ahmedalhawajri89/waeda-booking · Demo: waeda-booking.vercel.app

Opsight — Operations & Business Intelligence Dashboard 2026

Next.js 16 / React 19 front end · Laravel 12 REST API · MySQL

- Built a multi-business dashboard that combines orders, stock and expenses, compares each period with the previous one and flags ten rule-based insights, across four roles.
- Enforced about fifty abilities with Laravel policies; cost and profit fields are redacted on the server for staff accounts, and a test proves they never receive them.
- Prevented double stock deduction with database locks at order confirmation; 831 automated tests and Larastan run on every push in GitHub Actions.

Code: github.com/ahmedalhawajri89/opsight · Demo: opsight-demo.vercel.app

Diwan — Arabic-First Furniture Store 2026

Laravel 12 · Blade · Tailwind CSS 4 · Alpine.js · MySQL

- Built a bilingual storefront and admin panel with checkout, returns and VAT invoicing, and a room-fit check that tells the customer whether a piece fits their room and doorway.
- Locked the product row inside the order transaction to prevent overselling; 510 Pest tests gate every deployment.

Code: github.com/ahmedalhawajri89/diwan-e-commerce · Demo: diwan-xi.vercel.app

Takharruj — Graduation Project Management Platform 2023 – 2026

Laravel 12 · Blade · MySQL · Next.js 14 marketing site

- Built separate student, supervisor and admin spaces with their own auth guards, routes and permissions; grades lock on approval and reopen only with a reason in the audit log.
- Added server-side data tables and Excel import/export of student cohorts; 481 automated tests. Started in 2023 and upgraded to current framework versions in 2026.

Code: github.com/ahmedalhawajri89/takharruj · Demo: takharruj.vercel.app

EDUCATION

BSc, Applied Information Technology — Al-Aqsa University, Gaza, Palestine 2018 – 2022

LANGUAGES

Arabic: Native | English: Intermediate (reads technical documentation)
