PROFESSIONAL SUMMARY

Full-Stack Web Developer with a BSc in Applied Information Technology and five complete, publicly available web applications built end to end since 2022. Experienced across Laravel and PHP on the back end and Vue 3 on the front end, including relational schema design, role-based access control, design-system architecture and Arabic RTL interfaces. Seeking a junior full-stack developer role, onsite in Palestine or remote.

TECHNICAL SKILLS

Back End PHP 8.2, PHP 8.3, Laravel 11, Laravel 12, Eloquent ORM, Laravel Sanctum, migrations and seeders, REST-style routing, role-based access control, authentication, file upload and storage

Front End Vue 3, Composition API, Pinia, Vue Router, React 18, Next.js 14, JavaScript ES6, HTML5, CSS3, SCSS, Tailwind CSS, Blade, responsive design

Databases MySQL, SQLite, relational schema design, database constraints, foreign-key relationships

Tools Git, GitHub, Vite, npm, Composer, Vitest, Playwright, Chart.js, Prettier

Practices Design systems and design tokens, component-based architecture, repository pattern, Excel import and export, server-side data tables, technical documentation, Arabic RTL and bilingual interfaces, web accessibility

EXPERIENCE

Independent Full-Stack Developer

Self-directed projects · Gaza, Palestine · June 2022 – Present

- Built five complete web applications across three stacks: Laravel with Blade, Vue 3, and framework-free HTML, CSS and JavaScript.
- Designed relational database schemas from scratch, including a 24-table e-commerce schema covering catalogue, purchase, customer, engagement and audit-log domains.
- Implemented a scheduling availability engine that generates free slots from service duration, buffer time, resource and business hours, and prevents double-booking through half-open interval overlap detection.
- Implemented role-based access control with separate dashboards, route groups and permissions for three distinct user roles.
- Established documented design-token systems so visual changes are made in one source file rather than across the codebase.
- Wrote supporting product documentation including product requirements, system architecture, information architecture and user flows.
- Published all five projects as public GitHub repositories with MIT licences and written documentation.

PROJECTS

Waeda Appointment Booking Platform

Vue 3, Tailwind CSS, Pinia, Laravel 12, MySQL, PHPUnit, Vitest, Playwright

Live demo waeda-booking.vercel.app

Arabic-first booking platform for service businesses: each business has its own booking page where customers book with their phone number and no account, and the business runs its day from one console. Availability is computed from service length and buffer, the person or place booked, business hours that may cross midnight, special periods and prayer pauses. Double-booking is blocked by locking the resource row inside the transaction that writes the booking, proven by a test with two live connections. An appointment guard sends reminders, scores no-show risk and offers cancelled slots to the waitlist. Guest phones are verified by a server-issued code, and guest pages run on the business's time zone. Tested with 217 PHPUnit and 197 Vitest tests and a Playwright walkthrough. Code: github.com/ahmedalhawajri89/waeda-booking

Furnish E-Commerce Platform

Laravel 11, PHP, MySQL, Blade, SCSS

Full furniture e-commerce platform with storefront and admin dashboard. 24 Eloquent models covering products, variants, categories, carts, orders, payments, coupons, shipping methods, roles, wishlists, reviews and inventory logs. Order line items capture price at purchase time. Admin side includes product CRUD, order status management, review moderation and role-based user management. github.com/ahmedalhawajri89/furnish-ecommerce

Graduation Project Tracker

Laravel 12, PHP, MySQL, Sanctum, Next.js 14

University system managing graduation projects across three roles: admin, supervisor and student, each with its own dashboard and permissions. Includes bulk Excel import and export, group formation, supervisor assignment, milestone tracking, file submissions, threaded comments and final evaluation. Uses server-side data tables for large lists and a documented design-token layer. github.com/ahmedalhawajri89/graduation-project-tracker

Mawaheb Talent Discovery Platform

Laravel 11, PHP 8.3, MySQL, Blade

Arabic-first platform where creatives publish portfolios and apply to opportunities. Includes multi-step onboarding, discover and filtering, follow system, saved collections, opportunity posting and application tracking, profile view analytics, verification requests, subscription plans and notifications. RTL implemented with CSS logical properties with a full English toggle. github.com/ahmedalhawajri89/mawaheb-talent-platform

Kafala Orphan Sponsorship Platform

HTML5, CSS3, JavaScript

Live demo kafala-orphan-sponsorship.vercel.app

Fourteen-page Arabic RTL sponsorship and donation platform built without a framework. Complete CSS custom-property design system, stylesheets split by responsibility, and shared header, footer and modal partials injected at runtime from a single source. github.com/ahmedalhawajri89/kafala-orphan-sponsorship

EDUCATION

Bachelor of Science, Applied Information Technology

Al-Aqsa University · Gaza, Palestine · 2018 – 2022
